

Accuracy Report (ft)

R3 Pro with Traditional Survey Points from a Traverse!

Date:	2024-02-29 12:40:52
Project Date:	2023-08-13 07:25:12
Location	33.345595653808, -84.115766370146
Lidar	ROCK R3Pro
Acquisition Vehicle	DJI M300

Powered by **ROCK** robotic

Overview

This accuracy report describes the relationship between the ground control points and the LiDAR data. Each GCP is placed on the LiDAR data and a Z deviation is determined. The RMS takes into account the roughness of the LiDAR data to give a higher weight to GCP points on smoother surfaces.

Project Description

1,292 Points Per Square Meter!

120 Points per Square Foot

Traverse Points provided by Registered Survey Firm

Points taken by a Total Station

Heavily Vegetated Site with thick trees and grass

Horizontal Projection:

NAD83 / Georgia West (ftUS)

EPSG: 2240 Unit: ft

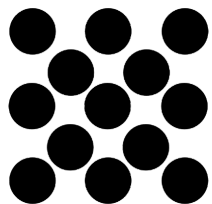

Vertical Projection:

NAVD88 height (geoid18) (ftUS)

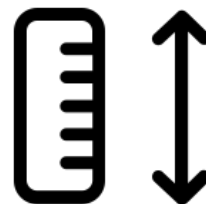

EPSG: 6360 Unit: ft

GCP Accuracy Summary

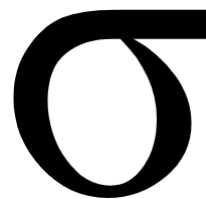

Point Density
120 points per sq ft

Vertical Accuracy
RMS
0.089 ft

Coverage
37 Acres

Standard Deviation
Elevation Delta
0.089 ft

Mean delta
in elevation
0.004 ft

Ground Control Points
